# Recommendation System

module

- Recommender system uses two techniques:
  - Content-based filtering
  - Collaborative filtering
- Our system used  
TMDB\_5000\_moviedataset  
TMDB\_5000\_creditsdataset
- To find the similarity between movies for our content based method, we'll use a cosine similarity function.

- Datasets are merged and essential columns - genres,keywords,overview,movies\_id,cast,crew,title are retained.
- A new dataframe with the following attributes is created- id,title,tag

```
new.head()
```

|   | movie_id |                                          | title       | tags                                              |
|---|----------|------------------------------------------|-------------|---------------------------------------------------|
| 0 | 19995    |                                          | Avatar      | In the 22nd century, a paraplegic Marine is di... |

| 2 | 206647   |                                          | Spectre     | A cryptic message from Bond's past sends him o... |
| 3 | 49026    | The Dark Knight Rises                    |             | Following the death of District Attorney Harve... |
| 4 | 49529    |                                          | John Carter | John Carter is a war-weary, former military ca... |

- 5000 frequently appearing words are extracted using `get_feature_names` function in `CountVectorizer` class.

```
In [38]: cv.get_feature_names()
```

```
30 ,  
'40',  
'50',  
'500',  
'60',  
'60s',  
'70',  
'aaron',  
'aaroneckhart',  
'abandoned',  
'abducted',  
'abigailbreslin',  
'abilities',  
'ability',  
'able',  
'aboard',  
'abuse',  
'abusive',  
'academic',  
'academy',
```

Cosine similarity is **a metric used to determine how similar two entities are irrespective of their size.** Mathematically, it measures the cosine of the angle between two vectors projected in a multi-dimensional space.

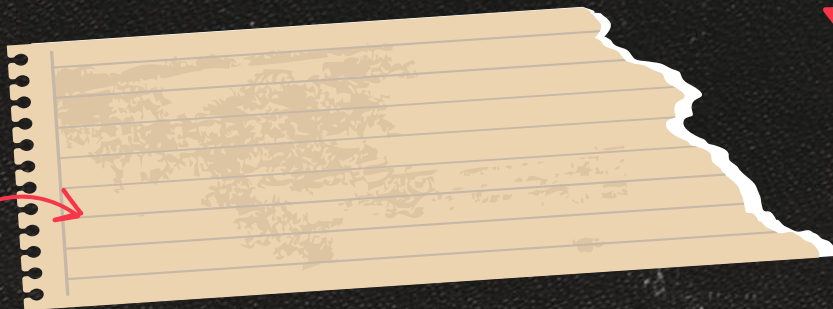

```
In [40]: similarity = cosine_similarity(vector)
```

```
In [41]: similarity
```

```
Out[41]: array([[1.          , 0.08964215, 0.06071767, ..., 0.02519763, 0.0277885 ,
                0.          ],
               [0.08964215, 1.          , 0.06350006, ..., 0.02635231, 0.          ,
                0.          ],
               [0.06071767, 0.06350006, 1.          , ..., 0.02677398, 0.          ,
                0.          ],
               ...,
               [0.02519763, 0.02635231, 0.02677398, ..., 1.          , 0.07352146,
                0.04774099],
               [0.0277885 , 0.          , 0.          , ..., 0.07352146, 1.          ,
                0.05264981],
               [0.          , 0.          , 0.          , ..., 0.04774099, 0.05264981,
                1.          ]])
```
